Ideation Phase
Brainstorm & Idea Prioritization Template

Date	19 September 2022
Team ID	IBMS120220014429
Project Name	University Admit Elgibility Predictor
Maximum Marks	4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Step-2: Brainstorm, Idea Listing and Grouping

2

Brainstorm

Write down any ideas that comes to mind that address your problem Statement

🕐 **10 minutes**

Sanosh S

Watch tutorials learn ml	required virtualization tools	fast prediction ml predictor
provide : user login, my library etc	add details on how we predict	rebuild from existing solutions

Sai Krishna Raj Mohan

let's learn most used ML and AI algo	let's learn most used Data visualization	provide service like "within budget universities"
add college recommendation system	deploy using cloud-fast and scalable	

Arun Prakash

collect new data's from users and implement a model	build new predictive model with accuracy	analyze existing apps/web services of such predictors
present results in understandable visual	for students thinking to take University provide guide 'how to select uni.."	

Sai Sathish

|		
learn web dev and frameworks	add location based predictions too	provide necessary links to recommended colleges
provide "stop" editor	provide web service with prediction for both students and learners	

Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go.
In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger
than six sticky notes, try and see if you and break it up into smaller sub-groups.

🕐 **20 minutes**

Requirements

- watch tutorials - learn ml
- required visualization tools
- let's learn most used ML and AI algo
- list most used ml and ai algo
- collect new data's from users and implement a model
- analyse existing apps/web services of such prediction
- deploy using cloud - fast and scalable

Application Type

- learn web dev and frameworks
- lets make app - anywhere and anytime useability

Core Features

- fast prediction ml predictor
- present results is understandable visual
- provide web service with prediction for both students and learners
- provide necessary links to recommended colleges
- provide: user login, my library etc
- show requirements vs users mark graph

Additional Features

- add location-based predictions too
- provide service like "within budget" universities
- for students thinking to take University, provide guide (how to select uni...)
- add details on how we predict
- add message of "areas of improvement" or "how to raise chance..."
- add additional content - blogs

Extras

- rebuild from existing solutions
- show comparative chart of marks
- add college recommendation system
- provide "sop" editor

Step-3: Idea Prioritization

4

Prioritize

Your team should all be on the same page about what's important moving
forward. Place your ideas on this grid to determine which ideas are important and
which are feasible.

⏱ 20 minutes

Importance

If each of these
tasks could get
done without any
difficulty or cost,
which would have
the most positive
impact?

Feasibility

Regardless of their importance, which tasks are more
feasible than others? (Cost, time, effort, complexity, etc.)
